Fig.6

Figure 1 consists of 12 scatter plots, labeled (a) through (l), arranged in a 6x2 grid. Each plot shows the relationship between a specific variable and the number of days of hospitalization. The x-axis for all plots is 'Days of Hospitalization', ranging from 0 to 100. The y-axis for each plot represents a different variable. The variables are: (a) Age, (b) Sex, (c) Marital Status, (d) Education, (e) Income, and (f) Health Insurance Status. The plots show varying degrees of correlation and distribution of data points. For example, plot (a) shows a positive correlation between age and days of hospitalization, while plot (b) shows a negative correlation between sex and days of hospitalization.

Fig. 9

Fig. 11

Figure 1 consists of 10 bar charts, labeled (a) through (j), each representing a different demographic or lifestyle category. The x-axis for all charts represents age groups: 18-24, 25-34, 35-44, 45-54, 55-64, 65-74, 75-84, and 85+. The y-axis represents the percentage of respondents, ranging from 0% to 100%.

- (a) Gender:** Shows the percentage of male and female respondents. The percentage of males is generally higher in younger age groups, while the percentage of females is higher in older age groups.
- (b) Education:** Shows the percentage of respondents with different levels of education: High school, College, Graduate, and Postgraduate. The percentage of respondents with higher education (Graduate and Postgraduate) increases with age.
- (c) Employment:** Shows the percentage of respondents who are employed, unemployed, or retired. The percentage of employed respondents is highest in the 25-54 age groups, while the percentage of retired respondents is highest in the 65+ age groups.
- (d) Income:** Shows the percentage of respondents in different income brackets: Low, Middle, and High. The percentage of respondents in the middle and high income brackets increases with age.
- (e) Marital status:** Shows the percentage of respondents who are married, single, divorced, or widowed. The percentage of married respondents is highest in the 35-64 age groups, while the percentage of single respondents is highest in the 18-34 age groups.
- (f) Religion:** Shows the percentage of respondents belonging to different religious groups: Hindu, Muslim, Christian, and Other. The distribution is relatively stable across age groups.
- (g) Political affiliation:** Shows the percentage of respondents who are affiliated with different political parties: Congress, BJP, and Other. The distribution is relatively stable across age groups.
- (h) Health status:** Shows the percentage of respondents who are healthy, have a chronic condition, or are disabled. The percentage of respondents with health issues increases with age.
- (i) Living arrangement:** Shows the percentage of respondents who live alone, with family, or in a community. The percentage of respondents living with family is highest in the 18-54 age groups, while the percentage of respondents living alone is highest in the 65+ age groups.
- (j) Travel frequency:** Shows the percentage of respondents who travel frequently, occasionally, or rarely. The percentage of respondents who travel frequently is highest in the 18-54 age groups, while the percentage of respondents who travel rarely is highest in the 65+ age groups.
